

```
--- djangoapi\scripts\001_hello_script.py ---
```

```
"""
```

This files can be executed in the following way:

```
python manage.py runscript script_without_extension
```

The scripts must be in the folder scripts

You can pass parameters to the scrip in the following way:+

```
python manage.py runscript script_without_extension --script-args param1 param2 ...
```

```
python manage.py runscript --script-args jaime martin 10 20
```

All parameters are received in string format

```
"""
```

```
def run(*args):
```

```
    """python manage.py runscript --script-args jaime martin 10 20 ..."""
```

```
    print(__file__)
```

```
    print("Hello script")
```

```
    if args:
```

```
        print("All args are received in string format")
```

```
        print(args)
```

```
        for arg in args:
```

```
            print(f"Hola, recibí el parámetro: {arg}")
```

```
    else:
```

```
        print("No se pasaron parámetros.")
```
